*As an energy company we provide electricity, heat, steam and water to our customers. In order to consider all process outputs and provide a more accurate representation of our total outputs, in 2005 we developed a methodology which has allowed us to calculate our data normalised by kWh equivalent. This methodology is available by request. Data from 2005 (and CO2 for 2004) is calculated on an equivalent basis, whilst data for the years 2001 to 2004 is unchanged.
