Saltend power station: Water vole project

The Water Vole Recovery Project, an initiative to safeguard the last remaining water vole population in the region, was launched by the Yorkshire Wildlife Trust in 2001. The area targeted being the River Hull, and its surrounding waterways. Saltend power station is built on one of the River Hull estuaries, and has been part of this environmental project since it was established. Saltend has supported this initiative through donations and employee assistance with the habitat restoration and enhancement scheme.
